

STEFANO IANNUCCI

Date of Birth:
Citizenship:
Spoken Languages: Italian, English

EDUCATION

Bachelor of Engineering <i>Computer Engineering</i>	2007
University of Rome "Tor Vergata"	Rome, Italy
Master's of Engineering <i>Computer Engineering</i>	2009
University of Rome "Tor Vergata"	Rome, Italy
Doctoral Degree <i>Computer Science and Automation Engineering</i>	2015
University of Rome "Tor Vergata"	Rome, Italy

ACADEMIC APPOINTMENTS

Postdoctoral Associate	September 2015 - August 2016
High Performance Computing Collaboratory, Mississippi State University	Starkville, MS, USA
Assistant Research Professor	August 2016 - August 2017
High Performance Computing Collaboratory, Mississippi State University	Starkville, MS, USA
Assistant Professor	August 2017 - present
Computer Science and Engineering, Mississippi State University	Starkville, MS, USA

OTHER APPOINTMENTS

Founder and CEO	January 2010 - December 2013
chmod srl	Colleferro (RM), Italy
Co-Founder and CTO	November 2012 - February 2015
grep srl	Rome, Italy

AWARDS AND HONORS

Best paper award	2011
IEEE 6th International Symposium on Service Oriented Systems (SOSE)	Irvine, CA, USA
Italian National Scientific Qualification (ASN 2018) for the role of Associate Professor in Computer Science (01/B1)	2020
Italian Ministry of Education, University and Research (MIUR)	Italy
Italian National Scientific Qualification (ASN 2018) for the role of Associate Professor in Computer Engineering (09/H1)	2021
Italian Ministry of Education, University and Research (MIUR)	Italy

TEACHING AND DISSEMINATION

Courses taught (as course responsible)

Information and Computer Security	Fall 2017, Fall 2018, Fall 2019
Mississippi State University	Starkville, MS
Special Topics on Autonomic Cyber-Security	Spring 2018
Mississippi State University	Starkville, MS
Secure Software Engineering	Spring 2019
Mississippi State University	Starkville, MS

Special Topics on Web Applications Penetration Testing Mississippi State University	Fall 2019 Starkville, MS
Operating Systems I Mississippi State University	Spring 2020, Fall 2020, Winter 2020, Spring 2021, Summer 2021 Starkville, MS
Special Topics on Autonomic Cyber-Security Mississippi State University	Fall 2020 Starkville, MS

Invited Speeches

"The biggest Cybersecurity Threats in America – Scams and How to Protect You and Your Family" Invited Seminar, Kiwanis Association of Tupelo	December 2017 Tupelo, MS
"Model-Based Intrusion Response for Enterprise Systems" Invited Seminar, University of Rome "Tor Vergata"	March 2018 Rome, IT
"Autonomic Security for Distributed Systems" Invited Seminar, Blekinge Institute of Technology (BTH)	May 2018 Karlskrona, SE
"Towards Autonomic Security Management" Invited as distinguished speaker, NIST Cybersecurity Risk Management Conference	November 2018 Baltimore, MD, USA
"Model-Based Autonomic Security Management for Distributed Systems" Invited Seminar, Sapienza University of Rome	July 2019 Rome, IT
"A Hybrid Model-Free Approach to Autonomic Security Management" Invited Seminar, University of Florida	January 2020 Gainesville, FL, USA
"A Hybrid Model-Free Approach to Autonomic Security Management" Keynote Speaker, IEEE International Conference on Intelligent Engineering and Management	April 2020 London, UK

Conference Presentations

"Designing a broker for QoS-driven runtime adaptation of SOA applications" IEEE International Conference on Web Services (ICWS) 2010	July 2010 Miami, FL, USA
"Improving SOA Applications Response Time with Service Overload Detection" ACM International Symposium on High-Performance Parallel and Distributed Computing (HPDC) 2012	June 2012 Delft, NL
"Designing a flexible and modular architecture for a private cloud: a case study" ACM International Symposium on High-Performance Parallel and Distributed Computing (HPDC) 2012	June 2012 Delft, NL
"Cloud Desktop Workload: a Characterization Study" IEEE International Conference on Cloud Engineering (IC2E) 2015	March 2015 Tempe, AZ, USA
"High-Performance Intrusion Response Planning on Many-Core Architectures" IEEE International Conference on Computer Communication and Networks (ICCCN) 2016	August 2016 Waikoloa, HI, USA
"A Comparison of Graph-Based Synthetic Data Generators for Benchmarking Next-Generation Intrusion Detection Systems" IEEE Cluster Conference 2017	September 2017 Honolulu, HI, USA
"Towards Self-Defense of Non-Stationary Systems" IEEE International Conference on Computing, Networking and Communications (ICNC) 2019	February 2019 Honolulu, HI, USA
"A Model-Integrated Approach to Designing Self-Protecting Systems" IEEE International Conference on Software Engineering (ICSE) 2019	May 2019 Montreal, CA

Ph.D. Students

- Kazizakia Sultana** 2017 - 2018
Mississippi State University Starkville, MS, USA
- Role: co-advisor, Ph.D. in Computer Science.
 - Topic: Analysis of micro-patterns and nano-patterns for the early identification of vulnerabilities in Java code.
- Patrick Day** 2018 - present
Mississippi State University Starkville, MS, USA
- Role: co-advisor, Ph.D. in Computational Engineering.
 - Topic: Synthetic Data Generation for Anomaly-Based Intrusion Detection.
- Paul Danko** 2019 - present
Mississippi State University Starkville, MS, USA
- Role: co-advisor, Ph.D. in Computer Science.
 - Currently working on the definition of his dissertation topic, which will be at the intersection of cyber-security and High-Performance Computing.
- Jesse Ables** 2020 - present
Mississippi State University Starkville, MS, USA
- Role: advisor, Ph.D. in Computer Science.
 - Topic: Design of an ensemble of techniques for the realization of a novel performance-oriented Intrusion Detection System.
- Shannon Birchell** 2020 - present
Mississippi State University Starkville, MS, USA
- Role: advisor, Ph.D. in Computational Engineering.
 - Currently working on the definition of his dissertation topic, which will fall under the broad area of Intrusion Response
- Damodar Panigrahi** 2021 - present
Mississippi State University Starkville, MS, USA
- Role: advisor, Ph.D. in Computer Science.
 - Currently working on the definition of his dissertation topic.

Master's Students

In addition to the students reported in what follows, I have been co-advisor for 9 Master's theses and 1 Bachelor thesis for the Computer Engineering program at University of Rome "Tor Vergata", during 2009 - 2015.

- Drew Kerby** 2017 - 2018
Mississippi State University Starkville, MS, USA
- Role: advisor, Master's in Computer Science.
 - Thesis topic: state space compression of Markov Decision Processes.
- Jesse Ables** 2018 - 2019
Mississippi State University Starkville, MS, USA
- Role: advisor, Master's in Computer Science.
- Justin Lewis** 2018 - 2019
Mississippi State University Starkville, MS, USA
- Role: advisor, Master's in Computer Science.
- Tushar Porwal** 2018 - 2019
Mississippi State University Starkville, MS, USA
- Role: advisor, Master's in Computer Science.
- Ovidiu Daniel Barba** 2018 - 2019
University of Rome "Tor Vergata" Rome, Italy

- Role: co-advisor, Master's in Computer Engineering
 - Thesis Topic: Self-Protection of Non-Stationary Systems
- Jordan Donovan** 2018 - 2019
Mississippi State University Starkville, MS, USA
- Role: co-advisor, Master's in Computer Science.
 - Thesis Topic: Image-Based Recognition of Materials
- Marcus Brumfield** 2019 - 2020
Mississippi State University Starkville, MS, USA
- Role: advisor, Master's in Computer Science.
 - Thesis Topic: Static Analysis of Code Micro and Nano-Patterns with Deep Learning for Bug Detection
- Andrea Silvi** 2019 - 2020
University of Rome "Tor Vergata" Rome, Italy
- Role: co-advisor, Master's in Computer Engineering.
 - Thesis Topic: Self-Protection of Non-Stationary Systems with Deep Learning
- Arthur Hubbard** 2019 - 2020
Mississippi State University Starkville, MS, USA
- Role: advisor, Master's in Computer Science.
- Ben Wiggins** 2020 - 2021
Mississippi State University Starkville, MS, USA
- Role: advisor, Master's in Computer Science.
- Matteo Lucantonio** 2020 - 2021
Sapienza University of Rome Rome, Italy
- Role: co-advisor, Master's in Computer Science.
 - Thesis Topic: Self-Protection of Non-Stationary Systems with Deep Learning
- Bhuvanesh Abburi** 2020 - present
Mississippi State University Starkville, MS, USA
- Role: advisor, Master's in Computer Science.

FUNDING INFORMATION [GRANTS AS PRINCIPAL INVESTIGATOR (PI) OR CO-PRINCIPAL INVESTIGATOR (CO-PI)]

PI: Research and innovation project for the design, implementation and exploitation of a Mobile Desktop-as-a-Service	2012-2015
Sponsor: POR FESR Lazio 2007/2013 FILAS SO 2011-1046 "Sostegno Agli Spin-Off Di Ricerca" - FILAS (Financing, innovation and research in Lazio, Italy)	EUR 98,000
PI: Application-specific Benchmarking for Big Data Analytics	2016-2017
Sponsor: Pacific Northwest National Laboratory (PNNL) High Performance Data Analytics	\$500,000
Co-PI: Dynamic Defense Strategy Planning for Research and Development and Infrastructure Networks	2017-2020
Sponsor: US Army Corps of Engineers, Engineer Research and Development Center	\$1,312,315
PI: Autonomous Security for Next Generation Health Care Systems	2018
Sponsor: MSU Global Discovery Seed Grant Program	\$15,000
PI: Intrusion Response Systems Evaluation	2020-2021
Sponsor: Google Cloud Platform Research Credits	\$5,000
Co-PI: Soft Computing-Based Intrusion Detection	<i>In Negotiation</i>
Sponsor: US Army Corps of Engineers, Engineer Research and Development Center	\$1,143,530
Co-PI: Autonomous Security Management	<i>In Negotiation</i>
Sponsor: US Army Corps of Engineers, Engineer Research and Development Center	\$1,060,042

PARTICIPATION AND DIRECTION OF RESEARCH GROUPS

Application-specific Benchmarking for Big Data Analytics.

08/2016 - 05/2017

Project Participants:

Mississippi State University

- Dr. Stefano Iannucci, Assistant Research Professor, Project Lead
- Dr. Arindam Khaled, full-time postdoc
- Dr. Hisham Kholid, part-time postdoc
- Dr. Rui Jia, part-time research assistant
- Dr. Ioana Banicescu, Professor
- Mr. Stefano Cordio, full-time research engineer
- Ms. Amrita Ghimre, Ph.D. student
- Mr. Justin Lewis, undergraduate student
- Mr. Spencer Callicott, undergraduate student

Dynamic Defense Strategy Planning for Research and Development and Infrastructure Networks.

08/2017 - 04/2020

Project Participants:

Mississippi State University

- Dr. Stefano Iannucci, Assistant Professor, Project Lead
- Mr. Andrea Montemaggio, full-time research engineer
- Ms. Melissa Hannis, full-time research engineer
- Ms. Russell Girault, part-time research engineer
- Mr. Justin Lewis, undergraduate student
- Mr. Spencer Callicott, undergraduate student

Soft Computing-Based Intrusion Detection

In Negotiation

Project Participants:

Mississippi State University

- Dr. Stefano Iannucci, Assistant Professor, Project Lead
- Dr. Shahram Rahimi, Professor and Department Head
- Dr. Ioana Banicescu, Professor
- Dr. Valeria Cardellini, Associate Professor
- Mr. William Anderson, Graduate Student
- Mr. Jesse Ables, Graduate Student
- Mr. Bhuvanesh Abburi, Graduate Student
- Post-doc to be identified

Autonomic Security Management

In Negotiation

Project Participants:

Mississippi State University

- Dr. Stefano Iannucci, Assistant Professor, Project Lead
- Dr. Drew Hamilton, Professor and Director
- Mr. Andrea Montemaggio, Research Engineer
- Post-doc to be identified

Furthermore, during my Ph.D. studies, I participated in the activities of the "Distributed And MObile systems eNginneering (DAMON) research group at the University of Rome "Tor Vergata". The DAMON group conducts research in the area of distributed systems, networks, mobile systems, cloud computing with an emphasis on analysis and optimization of the quality of service for adaptive and autonomic systems. The DAMON group collaborates/collaborated with national and international research groups: Politecnico di Milano, Università di Bologna, Università di Modena e Reggio Emilia, Sapienza University of Rome, Consiglio Nazionale delle Ricerche, ENEA, IBM T.J. Watson Research Center (USA), AT&T Labs, University of Massachusetts at Amherst (USA), George Mason University (USA), Blekinge Institute of Technology (SE). With the research group, I carried out research on:

- Quality of Service aware scheduling in grid systems;
- Optimal run-time composition and adaptation of web services in Service Oriented Architectures;
- Optimal Quality of Service aware adaptation of Cloud systems.

RESPONSIBILITY OF SCIENTIFIC RESEARCH ASSIGNED BY PRIVATE OR PUBLIC INSTITUTIONS

In the period 09/2015 – 08/2016 I was assigned, with a Postdoc contract at Mississippi State University, the responsibility of a research in collaboration with the Pacific Northwest National Laboratory (PNNL) for the design and realization of a novel Intrusion Response System for High Performance Computing clusters.

RESULTS OBTAINED IN THE TECHNOLOGICAL TRANSFER IN TERMS OF PARTICIPATION TO THE CREATION OF NEW COMPANIES (SPIN-OFF)

In 2012 I received a grant of EUR 98,000 for a project submitted to POR FESR Lazio 2007/2013 FILAS SO 2011 – 1046. The project regarded the creation of a start-up company focused on research, design and realization of a Desktop as a Service (DaaS) cloud provider. I was co-founder of this start-up, named *grep srl*, for which I worked full-time from 2012 to 2015. As a consequence, I have a gap in the publications in that time range. However, the start-up obtained excellent results, both in terms of research and development of the service, and in terms of commercial success. In 2015, I sold my share of *grep srl* to focus on research and I accepted a Postdoc position at MSU. *Grep srl* is still active and currently employing 5 people.

RESEARCH ACTIVITIES

My research interest is in Distributed Systems with an emphasis on Performance Optimization (and hence performance evaluation), Autonomic computing, Automated Intrusion Response, Optimal service composition, scheduling, and workload distribution.

Research Interest 1 - Keywords: Autonomic Computing, Intrusion Response, Non-Stationary Systems

The continuous increase in the quantity and sophistication of cyberattacks is making it more difficult and error prone for system administrators to handle the alerts generated by intrusion detection systems (IDSs). To deal with this problem, several intrusion response systems (IRSs) have been proposed lately. IRSs extend the IDSs by providing an automatic response to the detected attack. Such a response is usually selected either with a static attack-response mapping or by quantitatively evaluating all available responses, given a set of predefined criteria. In this research, I investigated a probabilistic model-based IRS built on the Markov decision process (MDP) framework. In contrast to most existing approaches to intrusion response, the proposed IRS effectively captures the dynamics of both the defended system and the attacker and is able to compose atomic response actions to plan optimal multiobjective long-term response policies to protect the system. With time, I refined the MDP-based approach by proposing a framework based on Model Integrated Computing for the design of Autonomic Security Management (ASM) systems. A solid software engineering work enabled me to quickly perform research on different challenges related to the MDP-based approach. Currently, I am working on three different interdisciplinary lines of research:

1. Application of pure/hybrid reinforcement learning techniques for the automatic control of non-stationary systems. Although the MDP-based approach is good to model the behavior of a system, one of the characteristics of computer systems is that they exhibit a non-stationary behavior due to many factors, among which, configuration changes, software updates, change of the user behavior, and so on. Computer systems could be monitored, and the resulting data could be used to change the parameters of the model. However, in order to take into account all the changes, a new MDP-based planning must be run, which is computationally expensive and time consuming. For these reasons, I am investigating the possibility of using pure/hybrid reinforcement learning and deep reinforcement learning techniques to automatically learn the system behavior and produce a security system that evolves together with the protected system.
2. Modeling of a n-agents stochastic game between (possibly multiple collaborating) attackers and (possibly multiple collaborating) defenders. Modelling the behavior of a system allows us to predict its evolution, and therefore to plan for a sequence of actions that are supposed to drive the system from a given state into a "safe region" of the state space. However, this is only part of the problem, because it

does not consider possible changes of strategy of the attacker. For this reason, I am investigating a multi-agent extension of the MDP-based approach, which results in the creation of a stochastic game. With the latter it is possible to model a set of multiple cooperative agents competing with another set of cooperative agents, which in our case could be the attackers and the defenders. If the defenders have a partial knowledge of the strategy of the attackers, and vice-versa, it is possible to devise proactive defense and attack strategies.

3. Addressing the “curse of dimensionality” resulting from a state-based approach with the introduction of novel optimal and sub-optimal heuristics and with the usage of many-core architectures, such as, Intel Xeon Phi and Nvidia GPGPUs. One of the main problems with a stateful approach is that the state space grows exponentially with the size of the modeled system. This makes the approach unusable even for relatively small systems. However, I am tackling the “curse of dimensionality” from several perspectives. In [J4] I proposed, and formally demonstrated, that it is possible to compute optimal solutions using a reduced state space when certain structural conditions of the MDP are met. Furthermore, I showed that, if sub-optimal solutions are acceptable, it is possible to build MDPs that have a state space that depends on the scope of the attack (i.e., the extension of the attack), instead of the size of the system, thus making the MDP-based approach usable for systems of arbitrary size.

The overarching goal of this research is to combine the approaches proposed in the three aforementioned lines of research, in order to obtain a fully autonomous security system.

Research Interest 2 - Keywords: Autonomic Computing, Service-Oriented Systems, Self-Adaptation, Non-Functional Requirements

Architecting software systems according to the service-oriented paradigm and designing runtime self-adaptable systems are two relevant research areas in today’s software engineering. In this research, I addressed issues that lie at the intersection of these two important fields. The Autonomic Computing paradigm, with the Monitor, Analyze, Plan, Execute, Knowledge (MAPE-K) framework has been employed in this research as the reference architecture. Research work has been carried out for all the phases of the MAPE loop, going from passive/active monitoring techniques, to time-series based analysis of non-functional parameters, such as, availability and response time. Several planning approaches have been proposed, each aimed at providing different Quality of Service assurances to the end user. All the aforementioned features and functionalities have been implemented in a state-of-the-art software prototype named MOSES. This research alone led to 10 high quality publications, including one journal article on IEEE Transactions on Software Engineering.

Research Interest 3 - Keywords: Intrusion Detection, Performance Benchmarking, Big Data

A common trend in Intrusion Detection Systems (IDSs) is to consider data structures based on graphs to analyze network traffic and attack patterns. Timely detecting a threat is fundamental to reduce the risk to which the system is exposed, but no current study aims at providing useful information to size Cloud or HPC infrastructures to meet certain service level objectives.

The purpose of this research was the design and implementation of a distributed benchmark for the evaluation of the performance of next-generation IDSs.

Several studies employing big data benchmarks have been conducted over the years to evaluate and characterize various big data systems and architectures. However, most of the state-of-the-art big data benchmarks are designed for specific types of systems, and lack diversity of data and workloads. Moreover, the diversity and rapid evolution of big data systems imposes challenges on workload selection and implementation, as it is unpractical to implement all big data workloads.

Furthermore, the fidelity of the performance results in context of real applications, such as in the area of Cyber-Security, mandates the use of application-specific benchmarks that require application-specific data generators which synthetically scale up and down a synthetic data set while maintaining its characteristics. For the above reasons, I carried out research and directed (as the PI) a research group (2 postdocs, 1 research

engineer, 2 graduate students and several undergraduate students) for the implementation of a comprehensive suite, which provides:

- Fast and flexible synthetic data generators with high degree veracity
- Intrusion detection representative workloads
- A user-friendly interface to monitor the cluster performance, showing application and system metrics

RESEARCH SERVICE

Editorial Service

Guest Editor Springer Cluster Computing	2018
Member of the Editorial Board Springer Cluster Computing	2019 - present
Guest Editor for the special issue "Advances in Self-Protecting Systems" Elsevier Future Generation Computer Systems	2019 - 2021

Conference Organization

Program Chair IEEE 12th Workshop on Feedback Computing	2017
